**drag and bot GmbH**

**Job-Titel:**
Frontend/Backend developer for robotics (m/f/d)

---

**Job-Beschreibung**

**About us**

We make controlling industrial robots as easy as using a smartphone. With drag&bot, you don’t need extensive robot training or engineering background to use robots. With drag&bot, every employee can set up, operate and use robots independently. Instead of replacing existing employees with automation, drag&bot qualifies them to become robot operators. This is how we help manufacturing companies to master the 4th industrial revolution!

**Tasks**

- Develop graphical Wizards and Guides to allow easy use of robots and hardware/software components
- Develop our web application
- Collaborate developing our UI/UX
- Document your development both for internal use and our clients
- Help with the packaging and deployment process

---

**Anforderungsprofil**

**Expected qualifications**

- Good team member which other can trust
- A good knowledge in C++ and Python
- Fluent in Linux environments
- Some experience with ROS
- Some experience with Docker
- Experience with DevOps tools will be a plus (e.g. Jenkins)
- Experience with Computer Vision will be a plus
- Experience with Force Control will be a plus
- Experience with Real Time systems will be a plus
- Experience with Artificial Intelligence will be a plus
- Good English or German for daily communication and documentation writing.

---
