drag and bot GmbH

Job-Titel:
Full Stack Web Developer in Industrial Robotics

Job-Beschreibung

About Us
We make controlling industrial robots as easy as using a smartphone. With drag&bot, you don’t need extensive robot training or engineering background to use robots. With drag&bot, every employee can set up, operate and use robots independently. Instead of replacing existing employees with automation, drag&bot qualifies them to become robot operators. This is how we help manufacturing companies to master the 4th industrial revolution!

Your Tasks
• You actively support us in the development of your web-based robot application
• You extend your GUI based on our roadmap and customer requirements
• You optimize the software for a good user experience, functionality, and elegance
• You work in the frontend with the Angular Framework and develop at the backend with Node.js and MongoDB
• You support the team in the implementation of project-related tasks

Our Offer
• You can start immediately
• Agile working method based on Scrum
• Exciting tasks with plenty of creative freedom in a dynamic start-up environment
• Fair payment & flexible working hours in our Stuttgart office
• A motivating and open working atmosphere
• Flat hierarchies and short decision paths

Anforderungsprofil

Your Qualifications
• You are enthusiastic about software and you have an eye for good design
• You have a university degree in computer science, media sciences or engineering
• You have experience in the development of web applications and a secure handling of modern frameworks for GUIs and web frontends
• You are responsible, a team player and goal-oriented
• You have good knowledge of German and English
